

Jobs – AV - Analytical Sciences – Research Scientist

Opportunity

This is an entrepreneurial opportunity for rapid growth as you help build a premier analytical research and testing organization in our laboratories in Thousand Oaks, CA.

Responsibilities

As the successful candidate, you will plan and execute contract analytical research projects and testing involving biotech products, pharmaceuticals, polymers, drug-delivery vehicles, nanoscale products, and novel materials using HPLC, mass spectrometry, spectrophotometry, and other analytical methods. You will develop new analytical methods and modify existing ones, perform testing services, write lab reports based on your work, help coordinate the purchase of lab supplies and reagents, review research notebooks, contribute to internal research projects, and communicate scientific results and issues with clients and management. Although travel is not a primary feature of this position, some travel might be required from time to time.

Preferred Candidate

The preferred candidate will have a Ph.D. in chemistry, medicinal chemistry, biochemistry, polymer science, or a related discipline, and excellent oral and written communication skills. Experience with modern analytical methods and instrumentation in a biochemical setting, including HPLC, MS, and spectrometry, strong laboratory skills, and the ability to manage multiple projects are also highly desirable.

Compensation

The compensation for this position will be commensurate with your capabilities, experience, and skill level.

The Company

Analytical Ventura is a division of Amethyst Life Sciences, Inc., a privately-funded startup company with exciting projects at the intersection of biotechnology, pharmaceutical science, nanotechnology, and materials science. Its offices and research laboratories are located in Thousand Oaks, CA. For more information or to apply for this position, please call us at 480-9900 or forward a copy of your resume online to jobs@amethystls.com.
